

SKOGDATA

papiNet status report Norway, Skogdata
2022.09.21

◆ Status - papiNet

- We continue to use papiNet as the main message exchange format
 - BusinessAcknowledgement, BusinessAcceptance, PurchaseOrder, OrderConfirmation, MeasuringTicket (Production & Invoice Specification), DeliveryMessage, InventoryStatus, ShipmentStatus, MeasuringInstruction, DeliveryInstruction
 - Around 2.8 million papiNet document exchanged yearly
- PapiNet documents is still only used internally between our core systems
- Api's are used externally, by partners and customers
- All papiNet communication between our systems are queue-based
- In process replacing BizTalk and MSMQ with Azure Service Bus as the core messaging platform.

Project status

- Finished and released the new Transport system
 - A system supporting both, logistics suppliers and carriers
 - Using papiNet DeliveryInstruction, DeliveryMessage, ShipmentStatus, MeasuringTicket
- Requirement specification for a new centralized measurement system. Complete rewrite from Progress to Microsoft .Net. Moving to cloud. New features.
- Integration between VSYS (Norway) and VIOL3 (Sweden) by exchanging MeasuringTickets
- Data lake for VSYS. Make raw data available for our customers.
- Building a centralized authentication solution (SSO) for our systems.
- Most systems at Skogdata is build on Progress Software. A significant part of the road map those next years will be to replace it.
